

Sustainability Statement

For the Allied Farmers Group, sustainability means:

- In making every decision, understanding our impact on people and the environment, meaning that we consider social, economic and environmental risks and benefits
- Caring for our environment and building strong rural communities while helping build a sustainable future for our food industries
- Ensuring our business is viable for the long term, delivers value and innovation for our customers, and provides our investors with the returns they deserve for entrusting us with their investments

We will do this by:

Our people, our communities

- Keeping our people safe, healthy, and engaged with their communities
- Providing a supportive workplace where we value the diversity of our people
- Seeking way to reduce our impact on the environment and communities within which we operate, and providing solutions to our food producing clients to achieve the same.
- Caring about the communities we operate in and live in

Caring for our environment

- acknowledging that all human activity impacts on the environment.
- Playing our role in improving New Zealand's food producing industries, because:
 - Right now, it is critically important in feeding the earths growing population in an efficient manner;
 - In the future, there is additional benefits in seeking to become even more efficient, and to produce food products with less impost on the natural and social environment.

Allied Farmer Group

- Reducing where economically viable, the environmental footprint of all aspects of our business.
- Regularly assessing the impact our businesses have on the environment and communities within which we operate.
- Partnering and collaborating with key stakeholders and communities with consistent sustainability values and goals
- Considering, as a key attraction to investment decisions, the application of innovation that reduces the environmental impact and increases the sustainability of the rural sector
- Providing greater and better choices to empower our food producing clients to make sustainable decisions and develop sustainable food systems
- Reflect in our behaviour that New Zealand's rural sector plays a vital role in ensuring a strong and sustainable food supply chain to feed a growing global population with changing tastes, reflective of both a growing "middle class" and concerns for the environmental impact of food production and distribution
- Rising to the global challenge of balancing the need for a sustainable supply chain of secure food, affordable prices, and environmental impact – and acknowledging that we have to play a key role in creating balanced solutions for this challenge.
